

## tec4U Compliance Solutions: Let's do IT better

Analyse

Consult

Support

tec4U-Solutions GmbH is a software- and engineering company and provides software, data service, consulting and training for producing and trade industries, focusing the industries automotive, commercial vehicle, electrical equipment, measuring and optical instruments, mechanical engineering, medical devices, ship building, textiles and toys.

tec4U-Solutions assists and supports companies within the fulfilment of legal and customer specifications concerning material compliance. The combination of engineering know-how and expertise in the field of software and supplier development is the foundation of the growing success and the continuous opening of new business areas.

tec4U-Solutions acts as professional partner to the customer with individual assistance to ensure cost reductions minimize of efforts, time savings and facilitation of work.

### Material Compliance Consulting

tec4U-Solutions helps with secure business processes and tested product and material data to reduce liability risks, in turn enabling companies to survive in the international market. Furthermore, tec4U-Solutions provides risk analysis and material substitution programs.

### Software Development

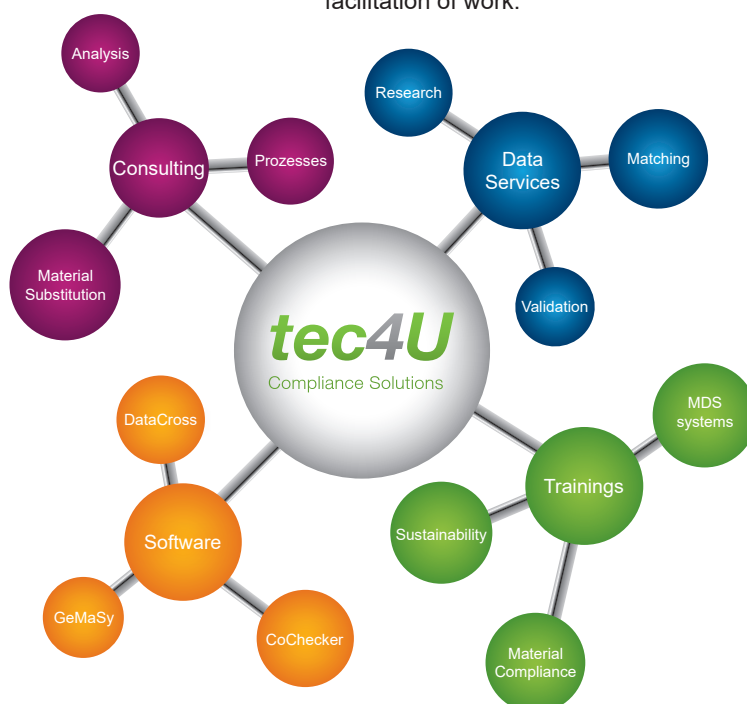

To implement the material compliance requirements, tec4U-Solutions offers software for transmitting (DataCross) and testing (CoChecker) of material data as well as for the hazardous substances management (GeMaSy).

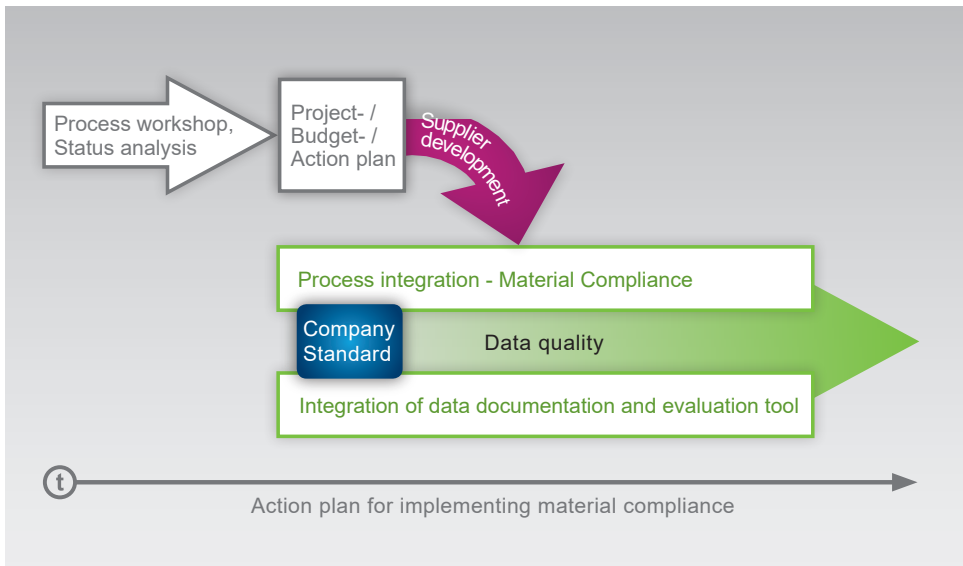

### (Material) Data Service

Throughout the entire data management process, tec4U-Solutions supports from data searches and data collection through to data validation and notification of suppliers or customers to data entry into proprietary or third-party systems.

### Trainings & Workshops

Whether training for the general sustainability of products or workshops concerning material compliance, tec4U-Solutions has always competent trainers ready to transfer the knowledge to the customer. Additionally, tec4U-Solutions offers trainings in the use of electronic systems for material data communication.

#### 1. Status analysis

Who integrates which components, and how, during the manufacturing process?

#### 2. Action plan

How can suppliers be induced to communicate data about their components and materials, and how can these data be exploited internally?

#### 3. Process modeling

What procedures are necessary for data processing?

#### 4. Company Standard

How to obligatory communicate requirements internal and external?

#### 5. Software integration

Which software is suitable for performing data documentation and analysis?

#### 6. Continuous improvement of data quality

How can the internal and external data processing be optimized?

## Engineering Expertise within Intelligent Software

The more complex a company is the more varied its software requirements will be. tec4U specializes in the development of database-driven, web based, multilingual software tools.

Our Material Compliance Software Solutions are:

#### DataCross

Cloud-based application for transmitting and evaluating material data, information regarding regulated materials, and safety data sheets in order to fulfill and legally implement customer specifications and material-relevant laws such as REACH, RoHS ...

#### GeMaSy

Web-based hazardous substances register for capturing information about the various hazardous materials. GeMaSy allows quick access to all safety-relevant information, thus helping reliably manage hazardous materials.

#### CoChecker

Testing of material data based on more than 65 laws, guidelines, regulations and customer requirements concerning material compliance issues worldwide.

Compliance Solutions

Certified according to DIN EN ISO 9001
