

# Best International Material Compliance Consulting Company 2022

**For even the largest of companies compliance can be a challenge. tec4U-Solutions provides leading material compliance consulting services, with decades of practical experience informing these bespoke and highly-efficient solutions. However, the company doesn't only specialise in this area, it also has several exciting side projects – so, join us as we speak to CEO, Stefan Nieser, and uncover more about the innovative business.**

 Built upon the desire to provide tailor-made, practicable solutions that ensure efficacy and compliance, tec4U-Solutions is a leading service and software provider that specialises in material compliance implementation for regulations such as Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), Restriction of Hazardous Substances in Electrical and Electronic Equipment (RoHS), and more. For many years, tec4U-Solutions has been honing its expertise on material specifications, sustainable product design, and hazmat management, which has earned it an international clientele and over 400 projects per year.

Since its genesis, tec4U-Solutions has achieved a great amount; however, Stefan Nieser, CEO, has one accomplishment that he believes defines the company. Stefan tells us, 'our most prominent achievement is our offered holistic approach that significantly lead to our successful global market position. Within this context tec4U Solutions acts as steady consultant for public policy and economy as well as for market surveillance and special interest groups like business organisations.'

Of course, there are many elements that set tec4U-Solutions apart from the rest of the market. As it is not focused on a single product or service, tec4U-Solutions is able to showcase itself as a one-stop shop for solutions, which is unique in the material compliance field. Its interdisciplinary consulting teams offer specialist competencies, which means that no matter what the issue may be, tec4U-Solutions is

sure to have an answer that fits perfectly. In summary, its unique selling point is that its solutions are 100% compliant, holistically integrated into every business area, are user friendly, and are fairly priced.

Stefan continues, 'German business from my point of view is the engine for industrial innovation in Europe. Cooperations between science and economy and the enormous high development competences of German businesses are the biggest strengths. From this, the German business landscape gains its force to survive in the sometimes industry hostile habitat.'

This attitude has informed tec4U-Solutions' approach over the years, especially in terms of trends, which the company strives to remain on top of. Henceforth, sustainability is the company's current priority – 'trends in the scope of sustainability definitely goes towards short-term realization of circular economy aspects of products,' explains Stefan. 'In this context intensively discussed are topics like product passport, carbon footprint, recyclability as well as eliminating substances of very high concern. That means, that in the future, a company will only be able to market products in Europe if they have a product passport.'

tec4U-Solutions is home to a team that has secured its place at the top of the market. Its team are intelligent, passionate, and thrive on collaboration, and these traits are nurtured through constant upskilling and regular opportunities to undertake training sessions. In addition, every staff member is appointed a contact within the company, who guides them through everything that they will need

to know in order to complete the job to a high standard. tec4U-Solutions aims to provide the best possible results for every project.

This will be an exceptional benefit for the company as it progresses into 2023; it has several plans in the pipeline and it will be further developing its offerings. Over the next few months and potentially years, tec4U-Solutions will be creating the future of circular economies and digital product passports, which it will be doing in the same way as it did for material compliance – as a holistic service provider. These advancements will include new software modules for its DataCross platform and a range of new consulting and training services.
